Dear Hiring Team and Line Manager,

After learning about the vacancy at your company, I wanted to apply to this position and would gladly join your team and support the company's continuous growth. Despite I am a junior developer, I am eager to learn and adapt to all new technologies - please consider reading my cover letter, and hopefully contact me, if you find that you would like to work with me.

My name is Máté Egri, and I have freshly completed the Green Fox's Full Stack Software developer program, after an 8 years of finance analyst career path. During my studies I learned TypeScript language, together with frontend and backend structure with Node.js and Express.js, MySQL, DOM, CSS, using NPM packages, JIRA management, GitHub, Promise/Async/Await functions and the use of React library. As for now, I didn't work with Angular framework, but after using React, I am sure that it would cause any problem to gain knowledge in it.

As a full stack developer, during the course we worked on a full stack web-based multiplayer game project, which contained registration, login, logout, database manipulation, front end design, fetching, API writing, and of course all the back end structure to work as a full stack project.

About my past knowledge and soft skills, being a dynamic, always open person helped me to go through several projects during my carrier, never saying no to self-, or process development. During my 8 years of finance experience at global companies taught me that tasks can always be improved, made faster, and automated. As a Financial Controller, I worked with large amounts of data, and scripting & automation became a regular part of my job when it came to improving workflow. This led me to work on various projects and taught me a new way of thinking. Given my longstanding interest in coding, this ultimately helped me make the decision to transition my career with Green Fox Academy.

Personal development and learning were always important to me. It made me step out of my comfort zone and helped me to become successful in my carrier. As a full-stack developer, it gives similar challenges and joy in work. It allows me as a developer to use a type of creativity to solve problems, gives a sense of building something, that can be utilised by a large number of people. Developing a program motivates me to take the right decisions to make something that I also would love to use.

Being a part of a multinational company, I am an open person, helping others, working in teams - organising internal MS Office & SAP trainings for my coworkers. Facing issues always motivated me to fix them, I see them as challenges. Also when I see the possibility of an improvement, I try to make it better, do it faster.

Looking forward to meeting you, sincerely,

Máté Egri
Junior Full Stack Developer
